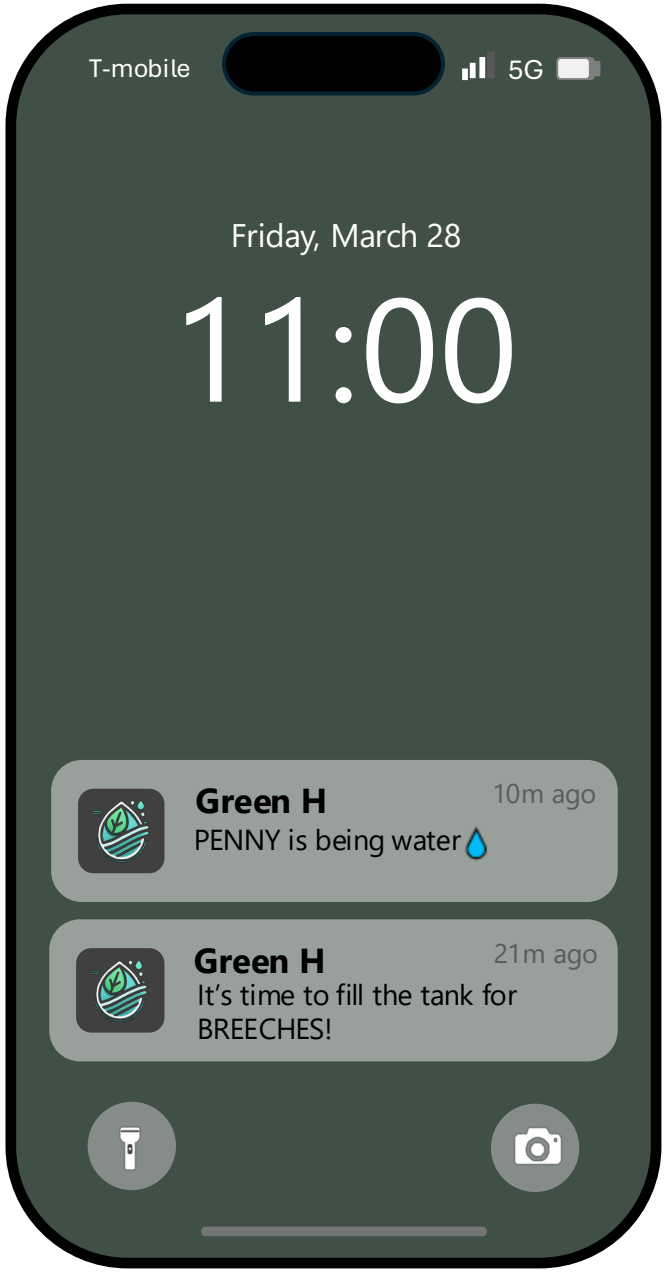
Smart pot app

Smart Notifications

Our app provides real-time interactive notifications to keep users informed about their plants.

- Get alerts when a plant is being watered.
- Receive reminders to refill the water tank when needed.
- Notifications can be customized in the app settings for a personalized experience.

These timely alerts help users stay engaged and ensure their plants stay healthy with minimal effort.

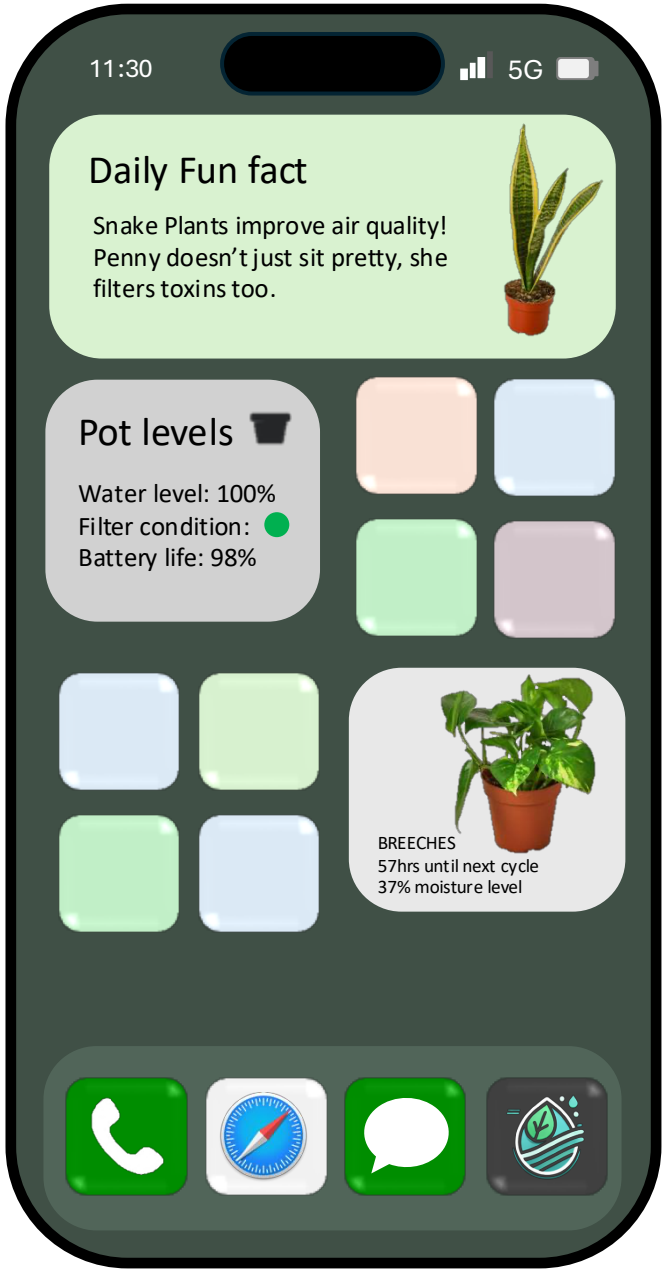


Home Screen Widgets

Stay connected with your plants from your home screen.

- Customizable widgets let you monitor plant status at a glance.
- View watering schedules, moisture levels, plant names, or fun facts instantly.
- Designed for quick access and daily engagement with your smart pots.

Having your plants visually present helps create a stronger connection and promotes better plant care habits.



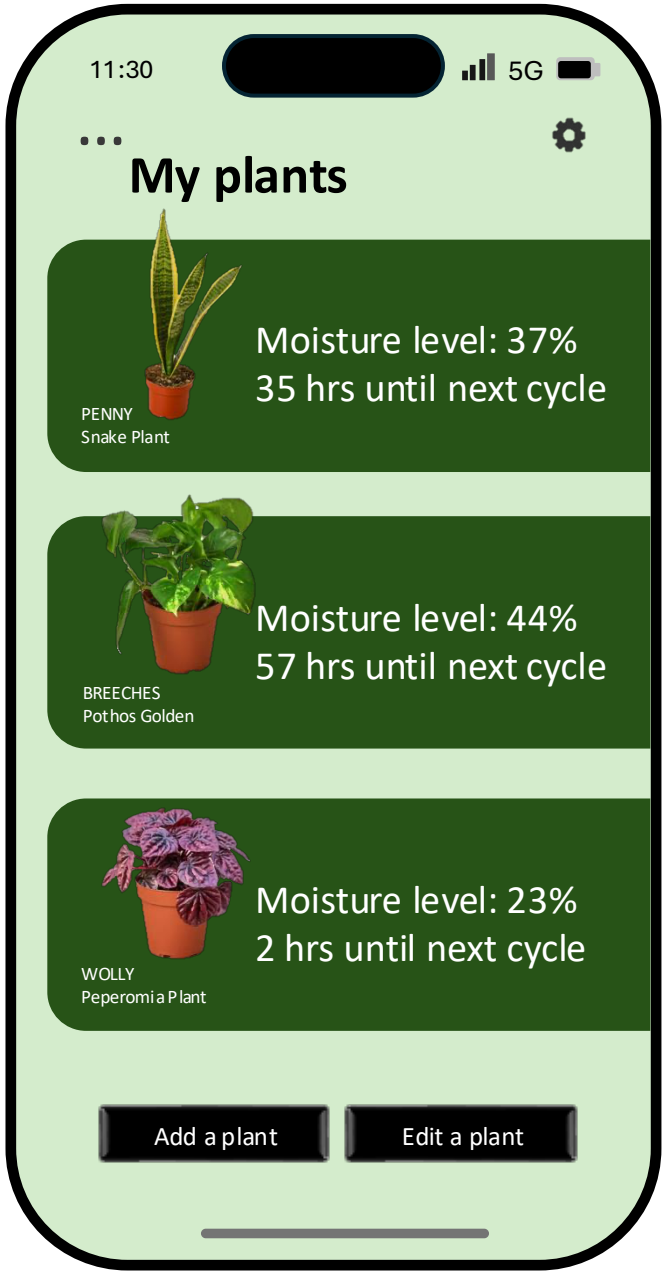
Main Screen

Plant Monitoring dashboard

Easily monitor all your plants in one place with real-time data.

- Displays individual moisture levels for each plant.
- Shows the estimated time until the next watering cycle.
- Designed for scalability—ideal for setups with multiple plants.
- Instantly accessible and easy to manage.

This centralized view helps users make informed decisions and stay connected to their plants' needs at all times.



In-Depth Pot Inspection

The app includes a quick-access menu for more detailed monitoring.

- The Inspect Pot option provides deeper insights into individual plant status.
- Users can view additional metrics or system diagnostics (e.g., sensor status, watering history).
- Accessible from the top-right menu for quick navigation.

This feature enhances user control and transparency in the plant care process.

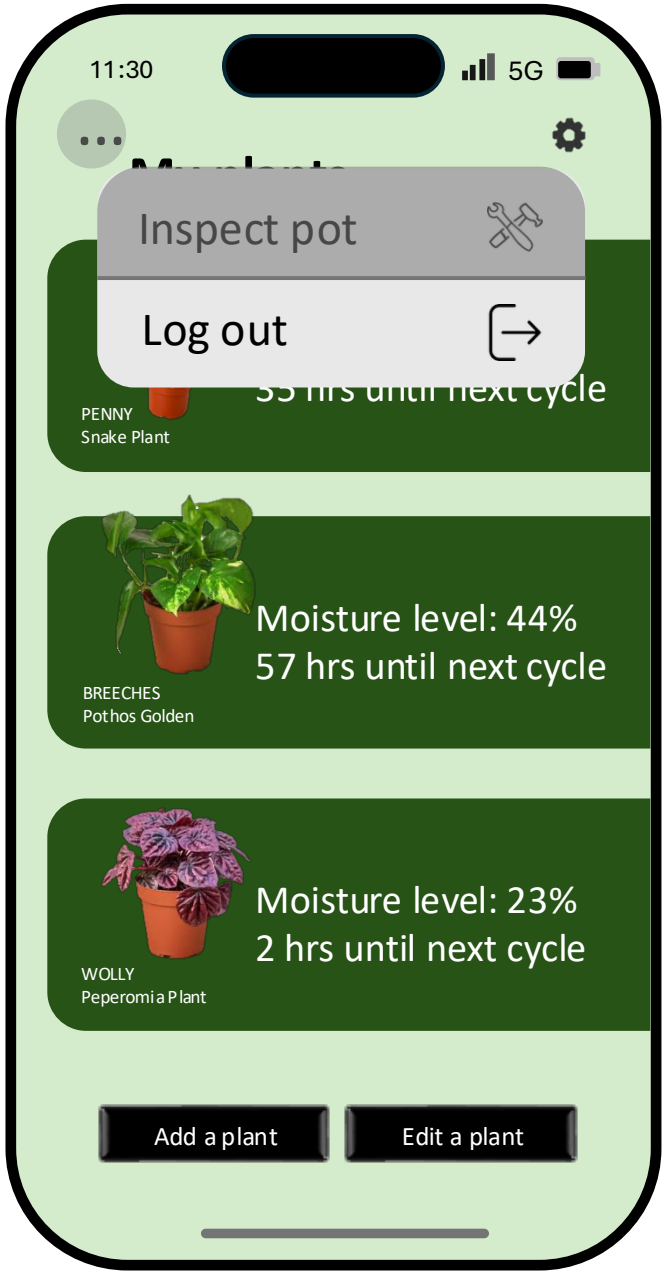
This feature enhances user control and transparency in the plant care process.



Pot Condition Overview

This screen features a visual representation of the smart pot and displays its key system indicators in real time.

- A dynamic graphic shows the current water level, giving the user an intuitive idea of tank capacity.
- Filter condition is shown with a color-coded status indicator (green = good).
- Battery life is displayed as a percentage, helping users know when to recharge.

This detailed status view enhances user trust by offering transparent and immediate feedback on the hardware's performance.

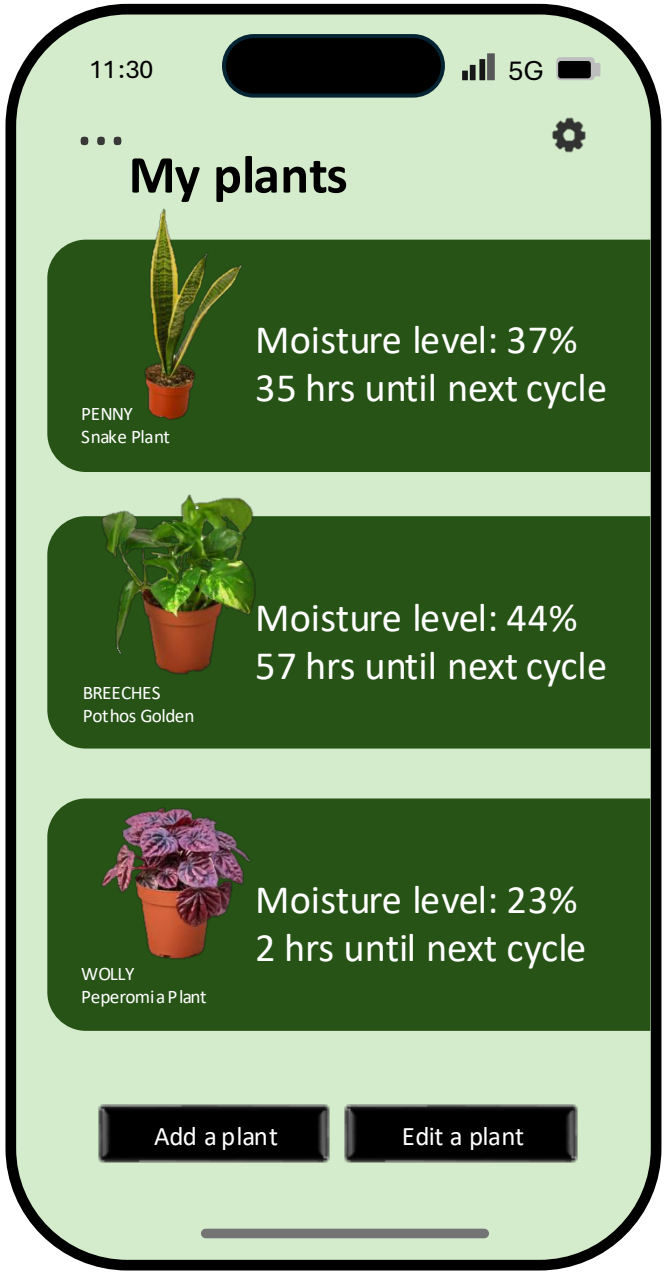
Easy Access to Settings

Users can quickly access the app's settings by tapping the gear icon in the top right corner of the main screen.

- Adjust notification preferences, watering thresholds, and language options.
- Personalize the app experience based on user needs or plant types.
- Ensures flexibility and user control without cluttering the main interface.

This settings shortcut enhances usability while maintaining a clean, focused dashboard.



Easy Access to Settings

Users can quickly access the app's settings by tapping the gear icon in the top right corner of the main screen.

- Adjust notification preferences, plant and pot management, view health history, and battery conditions.

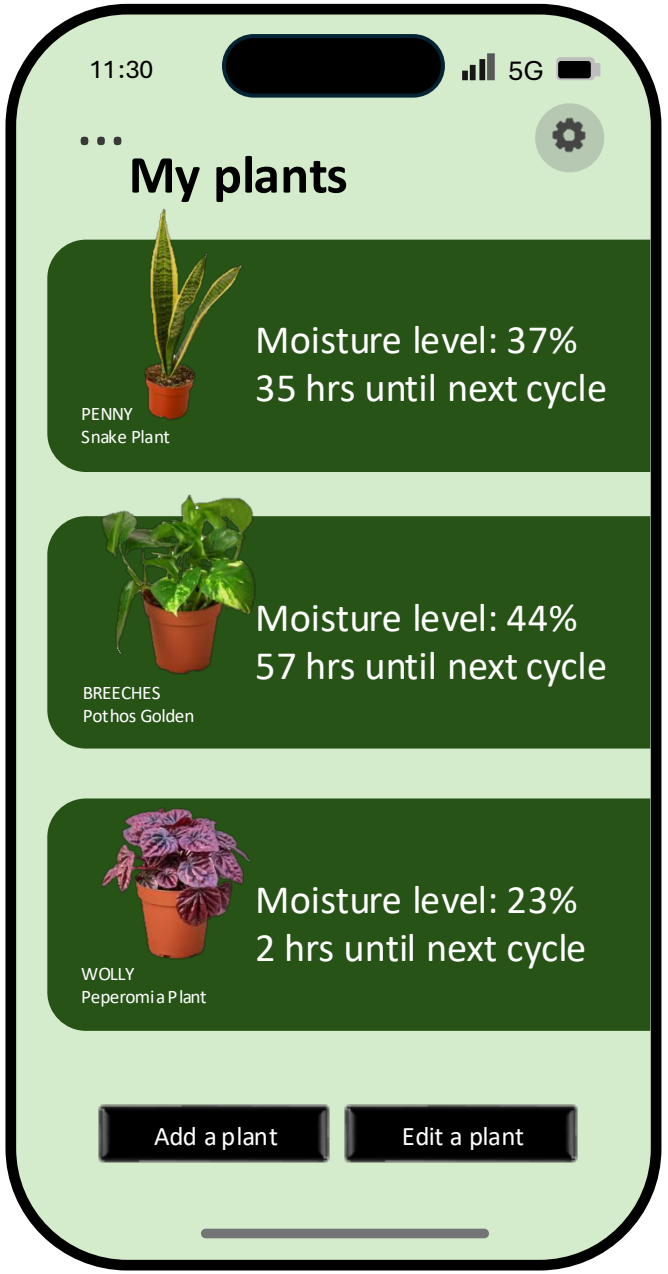
- Ensures flexibility and user control without cluttering the main interface.

This settings shortcut enhances usability while maintaining a clean, focused dashboard.



Settings Menu

Customization and Control

The settings menu allows users to tailor the app to their needs with advanced options:

- **Notifications** – Choose how many alerts you want and what type (watering started, low battery, refill reminder, etc.).
- **Plant Management** – Customize how much water each plant needs and label them with unique names for easy identification.
- **Pot Management** – Access and manage the overall system status, or return to the main plant overview page.
- **Health History** – View the watering history of each plant to identify care patterns and troubleshoot issues.
- **Battery Condition** – Monitor the pot's battery life and receive alerts when it's time to replace it, along with battery type info.

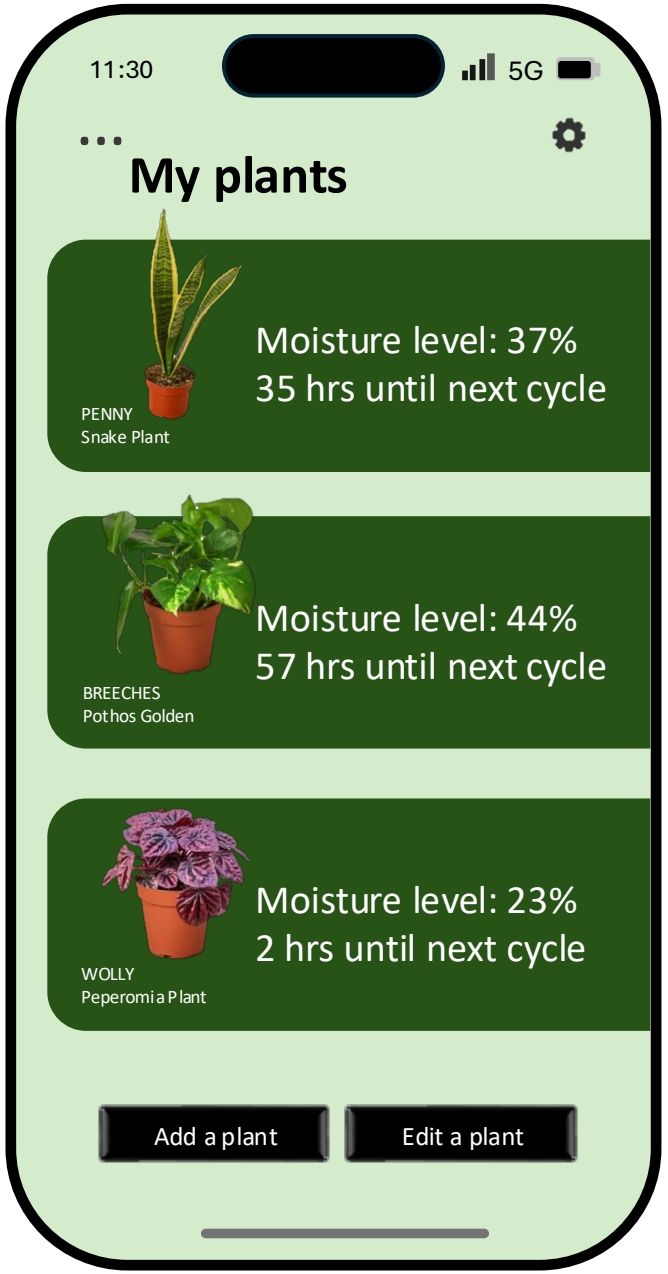
Back to Main Dashboard

After making changes or checking settings, users are brought back to the main monitoring screen.

- Instantly view updated moisture levels and time until the next watering cycle.
- Any customizations made in the settings (e.g., renamed plants or adjusted thresholds) are reflected here.
- The "Add a plant" and "Edit a plant" buttons remain accessible for continuous plant management.


This seamless return ensures a smooth user experience and quick access to the most important data.
